Putnam Short Duration Bond Fund (PARTX)

Pursuing income with a multi-sector, lower duration approach

Sector diversification

The fund invests in a diversified portfolio of fixed-income securities, including corporate debt, bank loans, sovereign debt, and securitized assets, such as mortgage-backed and asset-backed securities.

Managing rate sensitivity

The fund invests in short-term bonds and other securities, and generally maintains an effective duration, or interest-rate sensitivity, of three years or less.

Fundamental approach

The fund's experienced portfolio managers implement active strategies that consider several factors, including credit, interest-rate, and prepayment risks, and general market conditions.

Pursuing opportunities inside and outside the benchmark

Portfolio quality

● AAA	10.4%
● AA	13.3
● A	26.2
● BBB	26.1
● BB	0.9
● B	0.3
● CCC and below	0.1
● Not rated	3.2
● Net cash	19.4

Holdings represent 100% of the portfolio and will vary over time. Credit qualities are shown as a percentage of the fund's net assets. A bond rated BBB or higher (A-3 or higher, for short-term debt) is considered investment grade. This chart reflects the highest security rating provided by one or more of Standard & Poor's, Moody's, and Fitch. Ratings and portfolio credit quality will vary over time. Cash and net other assets, if any, represent the market value weights of cash, derivatives, and short-term securities in the portfolio. **The fund itself has not been rated by an independent rating agency.**

Portfolio composition

Investment-grade corporate bonds	46.9%
Residential MBS (non-agency)	15.4
Commercial MBS	14.8
Asset-backed securities (ABS)	3.0
High-yield corporate bonds	0.4
Net cash	19.4

Allocations may not total 100% of net assets because the table includes the notional value of derivatives (the economic value for purposes of calculating periodic payment obligations), in addition to the market value of securities.

Putnam Short Duration Bond Fund focus on total return with less interest-rate sensitivity

Portfolio repositioning

- Portfolio was repositioned June 1, 2018
- The fund will now manage duration exposure that is neutral to the ICE BofA 1-3 Year U.S. Corporate Index
- The fund will minimize the use of derivatives

Standard deviation

2.91

Average effective maturity

2.23

Standard deviation measures how widely a set of values varies from the mean. It is a historical measure of the variability of return earned by a fund's investment portfolio. **Average effective maturity** depends on the maturity of the underlying bonds within each fund. The longer the maturity, the greater the interest-rate risk. **Average effective duration** provides a measure of a fund's interest-rate sensitivity. The longer a fund's duration, the more sensitive the fund is to shifts in interest rates.

Current performance may be lower or higher than the quoted past performance, which cannot guarantee future results. Share price, principal value, and return will vary, and you may have a gain or a loss when you sell your shares. Performance of class A shares assumes reinvestment of distributions and does not account for taxes. After-sales-charge returns reflect a maximum 2.25% load. For a portion of the periods, the fund had expense limitations, without which returns would have been lower. For the most recent month-end performance, please visit putnam.com.

The ICE BofA 1-3 year U.S. Corporate Index is an unmanaged index of U.S. investment-grade corporate debt with a remaining term to maturity of less than 3 years. The ICE BofA U.S. Treasury Bill - ICE BofA 1-3 Year U.S. Corporate Linked Benchmark represents performance of the ICE BofA U.S. Treasury Bill Index through June 1, 2018, and performance of the ICE BofA 1-3 year U.S. Corporate Credit Index thereafter. You cannot invest directly in an index. ICE Data Indices, LLC (ICE BofA), used with permission. ICE BofA permits use of the ICE BofA indices and related data on an "as is" basis; makes no warranties regarding same; does not guarantee the suitability, quality, accuracy, timeliness, and/or completeness of the ICE BofA indices or any data included in, related to, or derived therefrom; assumes no liability in connection with the use of the foregoing; and does not sponsor, endorse, or recommend Putnam Investments, or any of its products or services. You cannot invest directly in an index.

Because the dollar amount of the monthly performance fee adjustment is based on the fund's average assets during the rolling performance period, the amount of any dollar adjustment as a percentage of a fund's current assets could exceed the "maximum annualized performance adjustment rates." Performance fee adjustments will not commence until a fund has been operating under a shareholder-approved management contract with a performance fee adjustment for at least 12 months.

Morningstar rankings for class A shares are based on total return without sales charge relative to all share classes of funds with similar objectives as determined by Morningstar. Morningstar rankings may differ significantly from Morningstar's risk-adjusted star ratings. Past performance is not indicative of future results.

Not all share classes are available on all platforms.

Consider these risks before investing: Allocation of assets among fixed-income strategies and sectors may hurt performance. The effects of inflation may erode the value of your investment over time. The value of investments in the fund's portfolio may fall or fail to rise over extended periods of time for a variety of reasons, including general economic, political, or financial market conditions; investor sentiment and market perceptions; government actions; geopolitical events or changes; and factors related to a specific issuer, geography, industry, or sector. These and other factors may lead to increased volatility and reduced liquidity in the fund's portfolio holdings. Bond investments are subject to interest-rate risk (the risk of bond prices falling if interest rates rise) and credit risk (the risk of an issuer defaulting on interest or principal payments). Interest-rate risk is generally greater for longer-term bonds, and credit risk is generally greater for below-investment-grade bonds. Unlike bonds, funds that invest in bonds have fees and expenses. Lower-rated bonds may offer higher yields in return for more risk. Funds that invest in government securities are not guaranteed. Mortgage-backed securities are subject to prepayment risk, which means that they may increase in value less when interest rates decline and decline in value more when interest rates rise. The fund may have to invest the proceeds from prepaid investments, including mortgage- and asset-backed investments, in other investments with less attractive terms and yields. International investing involves currency, economic, and political risks. Emerging-market securities have illiquidity and volatility risks. The fund may not achieve its goal, and it is not intended to be a complete investment program. Risks associated with derivatives include increased investment exposure (which may be considered leverage) and, in the case of over-the-counter instruments, the potential inability to terminate or sell derivatives positions and the potential failure of the other party to the instrument to meet its obligations. Our investment techniques, analyses, and judgments may not produce the outcome we intend. The investments we select for the fund may not perform as well as other securities that we do not select for the fund. We, or the fund's other service providers, may experience disruptions or operating errors that could have a negative effect on the fund. You can lose money by investing in the fund.

Request a prospectus or a summary prospectus, if available, from your financial representative or by calling Putnam at 1-800-225-1581. These prospectuses include investment objectives, risks, fees, expenses, and other information that you should read and consider carefully before investing.
