Putnam Dynamic Risk Allocation Fund

A globally diversified fund pursuing strong risk-adjusted returns with a dynamic allocation approach

Risk-based allocation

The fund allocates to four risk sources — equity, credit, interest rate, and inflation — to better balance equity risk and improve downside protection.

Top-down flexibility

The portfolio managers dynamically adjust allocations to reflect active top-down views of future risk-adjusted return potential.

Active approach

The fund invests selectively in a range of lower-volatility and hedging strategies to further diversify sources of returns and manage risk.

Portfolio composition by asset weight

| | |
|-----------------------------|--------|
| International bonds | 49.03% |
| U.S. Equity | 23.69 |
| U.S. Investment-grade bonds | 23.42 |
| International equity | 10.73 |
| Commodities | 2.13 |
| U.S. money markets | -8.99 |

Allocations will vary over time. Due to rounding, percentages may not equal 100%.

Holdings represent 2.53% of the portfolio and will vary over time.

The fund's asset weight composition differs from the risk exposure weightings. Asset weight shows the combination of portfolio holdings and derivatives strategies that the portfolio management team uses to allocate risks. The asset weight can provide an indication of the amount of leverage in the portfolio. Negative percentages reflect the effect of the fund's risk hedging strategies. You can lose money by investing in the fund. Leverage may be achieved either through short-term borrowing or through the use of derivatives. Asset weights may exceed 100% in funds that employ leverage due to borrowed capital and/or derivatives exposure. Asset weight for Putnam Dynamic Risk Allocation Fund represents a baseline allocation selected by the fund's portfolio managers and is subject to change. It is inclusive of leverage and represents a starting point for future active allocation. Diversification does not assure a profit.

Growth of a \$10,000 investment

The fund has returned an average of 2.7% annually since inception.

Current performance may be lower or higher than the quoted past performance, which cannot guarantee future results. Share price, principal value, and return will vary, and you may have a gain or a loss when you sell your shares. Performance of class Y shares assumes reinvestment of distributions and does not account for taxes. Class Y shares, available to investors through an asset-based fee program or for institutional clients, are sold without an initial sales charge and have no CDSC. For the most recent month-end performance, please visit putnam.com.

|----------|----------------|
| 1 year | 85% (383/441) |
| 3 years | 100% (403/407) |
| 5 years | 99% (350/361) |
| 10 years | 97% (235/251) |

Expense ratio

(Y shares)

| | |
|---------------------|-------|
| Total expense ratio | 1.28% |
| What you pay | 0.93% |

(A shares)

| | |
|---------------------|-------|
| Total expense ratio | 1.53% |
| What you pay | 1.18% |

“What you pay” reflects Putnam Management’s decision to contractually limit expenses through 9/30/22.

Standard deviation

(Y shares)

10.85

Beta

0.85

Standard deviation measures how widely a set of values varies from the mean. It is a historical measure of the variability of return earned by an investment portfolio. **Beta** is defined as a fund’s sensitivity to market movements and is used to evaluate market related, or systematic, risk. It is a historical measure of the variability of return earned by an investment portfolio. Risk statistics are measured using a 3-year regression analysis. For funds with shorter track records, since inception analysis is used.

The Putnam Dynamic Risk Allocation Blended Index is an unmanaged index administered by Putnam Management. Effective September 1, 2020, the composition of the Putnam Dynamic Risk Allocation Blended Index is 60% MSCI World Index (ND) and 40% FTSE® World Government Bond Index. Prior to September 1, 2020, the Putnam Dynamic Risk Allocation Blended Index was comprised as follows: 50% MSCI World Index (ND), 40% Bloomberg Global Aggregate Bond Index, and 10% S&P GSCI®. You cannot invest directly in an index.

Current performance may be lower or higher than the quoted past performance, which cannot guarantee future results. Share price, principal value, and return will vary, and you may have a gain or a loss when you sell your shares. Performance of class A and Y shares assumes reinvestment of distributions and does not account for taxes. After-sales-charge returns for class A reflect a maximum 5.75% load. Class Y shares, available to investors through an asset-based fee program or for institutional clients, are sold without an initial sales charge and have no CDSC. For the most recent month-end performance, please visit putnam.com.

Morningstar rankings for class Y shares are based on total return without sales charge relative to all share classes of funds with similar objectives as determined by Morningstar. Morningstar rankings may differ significantly from Morningstar’s risk-adjusted star ratings. Past performance is not indicative of future results.

Consider these risks before investing: Emerging market securities carry illiquidity and volatility risks. The fund may invest a portion of its assets in small and/or midsize companies. Such investments increase the risk of greater price fluctuations. Funds that invest in government securities are not guaranteed. Mortgage-backed securities are subject to prepayment risk, which means that they may increase in value less than other bonds when interest rates decline and decline in value more than other bonds when interest rates rise.

Allocation of assets among asset classes may hurt performance, and efforts to diversify risk through the use of leverage and allocation decisions may not be successful. If the quantitative models or data that are used in managing the fund prove to be incorrect or incomplete, investment decisions made in reliance on the models or data may not produce the desired results and the fund may realize losses. Derivatives carry additional risks, such as the inability to terminate or sell derivatives positions and the failure of the other party to meet its obligations. Growth stocks may be more susceptible to earnings disappointments, and value stocks may fail to rebound. Bond investments are subject to interest-rate risk (the risk of bond prices falling if interest rates rise) and credit risk (the risk of an issuer defaulting on interest or principal payments). Interest-rate risk is generally greater for longer-term bonds, and credit risk is generally greater for below-investment-grade bonds. Unlike bonds, funds that invest in bonds have fees and expenses. Active trading strategies may lose money or not earn a return sufficient to cover trading and other costs. Use of leverage obtained through derivatives increases these risks by increasing investment exposure. Over-the-counter derivatives are also subject to the risk of the potential inability to terminate or sell derivatives positions and the potential failure of the other party to the instrument to meet its obligations. REITs are subject to the risk of economic downturns that have an adverse impact on real estate markets. The use of short selling may result in losses if the securities appreciate in value. Commodities involve market, political, regulatory, and natural conditions risks. The value of investments in the fund’s portfolio may fall or fail to rise over extended periods of time for a variety of reasons, including general economic, political, or financial market conditions; investor sentiment and market perceptions; government actions; geopolitical events or changes; and factors related to a specific issuer, geography, industry, or sector. International investing involves currency, economic, and political risks. These and other factors may lead to increased volatility and reduced liquidity in the fund’s portfolio holdings.

Our investment techniques, analyses, and judgments may not produce the outcome we intend. The investments we select for the fund may not perform as well as other securities that we do not select for the fund. We, or the fund’s other service providers, may experience disruptions or operating errors that could have a negative effect on the fund. You can lose money by investing in the fund.
