* "What you pay" reflects Putnam Management's decision to contractually limit expenses through 2/28/20 for Global Income Trust and 1/30/20 for Mortgage Securities Fund.

A negative percentage reflects the effect of fund strategies that are designed to enhance performance if certain securities decline in value.

Data is for class Y shares. Portfolio characteristics will vary over time. Due to rounding, percentages may not equal 100%.

Current performance may be lower or higher than the quoted past performance, which cannot guarantee future results. Share price, principal value, and return will vary, and you may have a gain or a loss when you sell your shares. Performance assumes reinvestment of distributions and does not account for taxes. Class Y shares, available to investors through an asset-based fee program or for institutional clients, are sold without an initial sales charge and have no CDSC. For the most recent month-end performance, please visit putnam.com.

- 1 Risks associated with derivatives include increased investment exposure (which may be considered leverage) and, in the case of over-the-counter instruments, the potential inability to terminate or sell derivatives positions and the potential failure of the other party to the instrument to meet its obligations.
- 2 Bond investments are subject to interest-rate risk (the risk of bond prices falling if interest rates rise) and credit risk (the risk of an issuer defaulting on interest or principal payments). Interest-rate risk is greater for longer-term bonds, and credit risk is greater for below-investment-grade bonds. Unlike bonds, funds that invest in bonds have fees and expenses.
- 3 International investing involves currency, economic, and political risks. Emerging-market securities carry illiquidity and volatility risks.
- 4 Lower-rated bonds may offer higher yields in return for more risk.
- 5 Funds that invest in government securities are not guaranteed. Mortgage-backed investments carry the risk that they may increase in value when interest rates decline and decline in value when interest rates rise.
- 6 Floating rate loans may reduce, but not eliminate, interest-rate risk. These loans are typically secured by specific collateral or assets of the issuer. (Holders of the loan, such as the fund, have a priority claim on those assets in the event of the issuer's default or bankruptcy.) Value of collateral may be insufficient to meet the issuer's obligations, and the fund's access to collateral may be limited by bankruptcy or other insolvency laws.
- 7 The fund invests in fewer issuers or concentrates its investments by region or sector, and involves more risk than a more broadly invested fund.
- 8 Credit qualities are shown as a percentage of net assets. A bond rated BBB or higher (A-3 or higher, for short-term debt) is considered investment grade. This chart reflects the highest security rating provided by one or more of Standard & Poor's, Moody's, and Fitch. Short-term cash bonds are included in their closest long-term equivalent rating category. To-be-announced (TBA) mortgage commitments, if any, are included based on their issuer ratings. Ratings and portfolio credit quality will vary over time. Derivative instruments, including currency forwards, are only included to the extent of any unrealized gain or loss on such instruments and are shown in the not-rated category. Cash is also shown in the not-rated category. Derivative offset values are included in the not-rated category and may result in negative weights. The fund itself has not been rated by an independent rating agency.
- 9 Credit qualities are shown as a percentage of net assets. A bond rated BBB or higher (A-3 or higher, for short-term debt) is considered investment grade. This chart reflects the highest security rating provided by one or more of Standard & Poor's, Moody's, and Fitch. Short-term cash bonds are included in the net cash category. Ratings and portfolio credit quality will vary over time. Derivative instruments, including currency forwards, are only included to the extent of any unrealized gain or loss on such instruments and are shown in the net cash category. Cash is also shown in the net cash category. The fund itself has not been rated by an independent rating agency.
- 10 The value of investments in the fund's portfolio may fall or fail to rise over extended periods of time for a variety of reasons, including general economic, political, or financial market conditions; investor sentiment and market perceptions; government actions; geopolitical events or changes; and factors related to a specific issuer, geography, industry, or sector. These and other factors may lead to increased volatility and reduced liquidity in the fund's portfolio holdings.
- 11 Allocation of assets among fixed-income strategies and sectors may hurt performance. The fund may not achieve its goal, and it is not intended to be a complete investment program. The fund's efforts to produce lower-volatility returns may not be successful and may make it more difficult at times for the fund to achieve its targeted return. Under certain market conditions, the fund may accept greater-than-typical volatility to seek its targeted return.

For informational purposes only. Not an investment recommendation.

Clients can make purchases at NAV in any Putnam taxable fixed-income fund when investing \$500,000 or more.

Your clients should carefully consider the investment objectives, risks, charges, and expenses of a fund before investing. For a prospectus or summary prospectus containing this and other information for any Putnam fund or product, call the Putnam Client Engagement Center at 1-800-354-4000. Your clients should read the prospectus carefully before investing.
